

Usage Manual

1 Introduction

Welcome to ContextOnTabs (COTS). This extension helps you create floating AI context panels from content you highlight in your browser, making your research and workflow more efficient.

2 Get the installation files

If you are a user looking to install the extension, follow these steps.

1. Download the latest extension build here for your browser:

https://github.com/louisotieno2001/ContextOnTabs/releases/tag/Extension_builds

2. Save the file to your computer.
3. If you downloaded the chrome zip file, proceed and unzip the folder to make it ready for use while for firefox do not unzip. Keep it as a zip files.

NB: Unzip only chrome zip file. Firefox will be used as a zip file.

For Developers Only (You can skip this if not a technical expert)

If you are a developer looking to contribute or run the latest version, you can build the extension locally.

1. Clone the repository

```
git clone https://github.com/louisotieno2001/ContextOnTabs.git
```

2. Ensure you have pnpm installed.
3. Run the following command to install dependencies:

```
pnpm install
```

4. To build for development (unpacked):

```
pnpm build // Chrome
pnpm build:firefox // Firefox
```

5. To package into zip file (Firefox only):

```
pnpm package:firefox
```

The extension files will be generated in the build/ folder.

3 Once the installation files are ready, follow these steps:

1. Open your browser(Chrome, Firefox e.t.c)
2. Paste these links into your search bar:
 - Firefox: <about:debugging#/runtime/this-firefox>
 - Chrome: <chrome://extensions/>
3. You should see these pages upon success:
 - If you do not come across the exact shared pages on pasting the links, search on the web how to get to the browser extension management page of your browser. Googling should be straightforward, in the normal way you would google any information over the net.
 - However for the described browsers, Firefox(ESR) or other and Google Chrome, you should not come across issues using the shared links, they are guaranteed to get you to the correct page.

4 Installation process

Once you are on the pages shown above, it is time to upload you installation files. Once you have you zip file for firefox and the unzipped chrome, follow these steps:

1. Click the **Load unpacked** button in chrome and **Load Temporary Add-on** button for firefox.

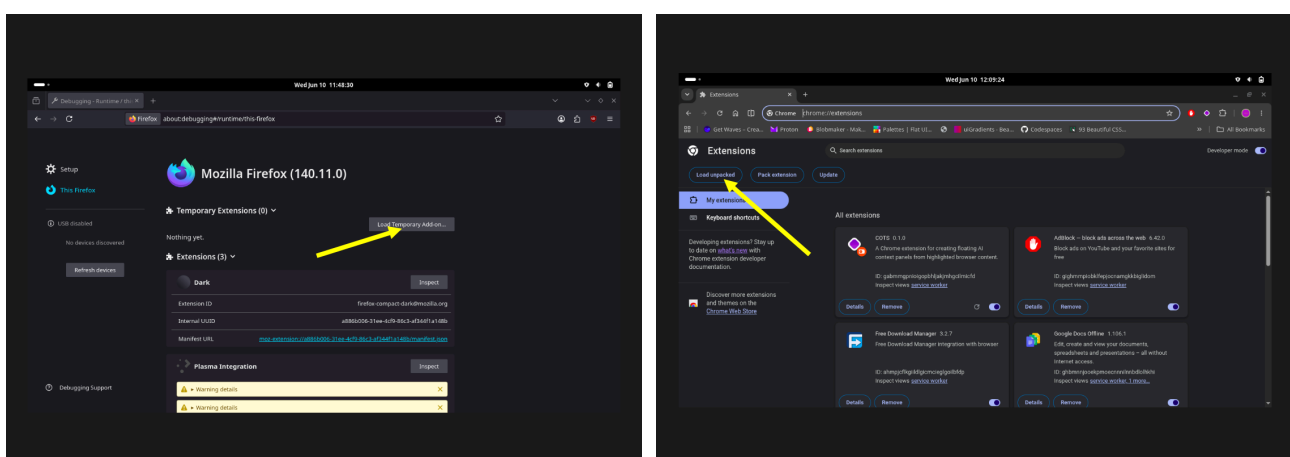

Figure 2: Loading extension install files

5 Installed Extension Ready for use

Once you upload the you should be able to see the Extensions in your Extensions list as shown below:

- If you do not see them on the list, try the installation process again to make sure you selected the correct file.

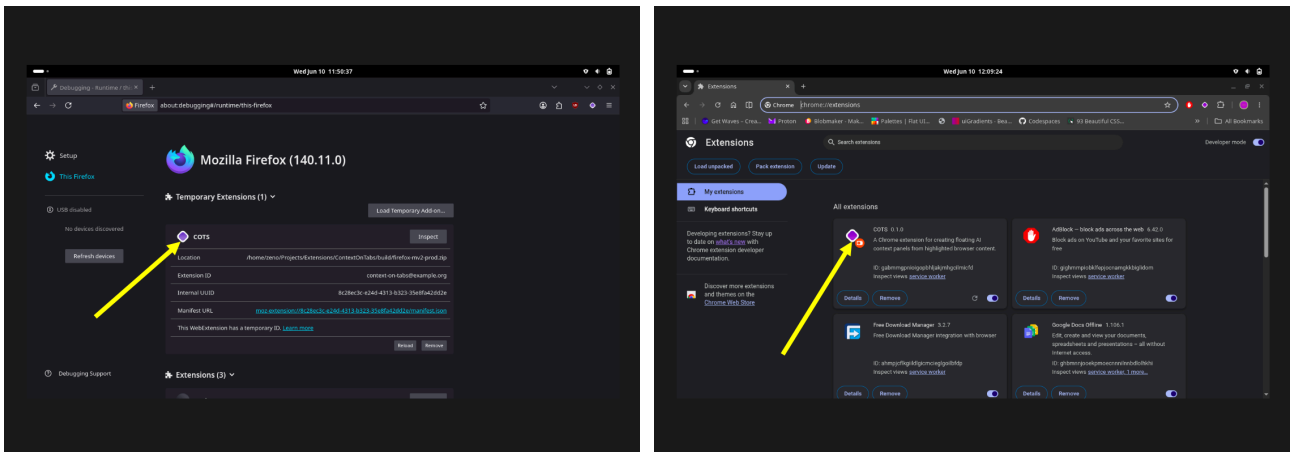

Figure 3: Listed Extensions

6 Pin Extension for easy access

Once installed, you can pin the extension for easy access. For Firefox, the extension is automatically pinned but if not, google how to pin extensions from the extension lists page.

For chrome follow the steps shown in the images below:

1. Click on the Extensions Icon from Chrome so that you can see the list of installed Extensions
2. Click in the Pin Icon until it turns blue or you see the cross on it

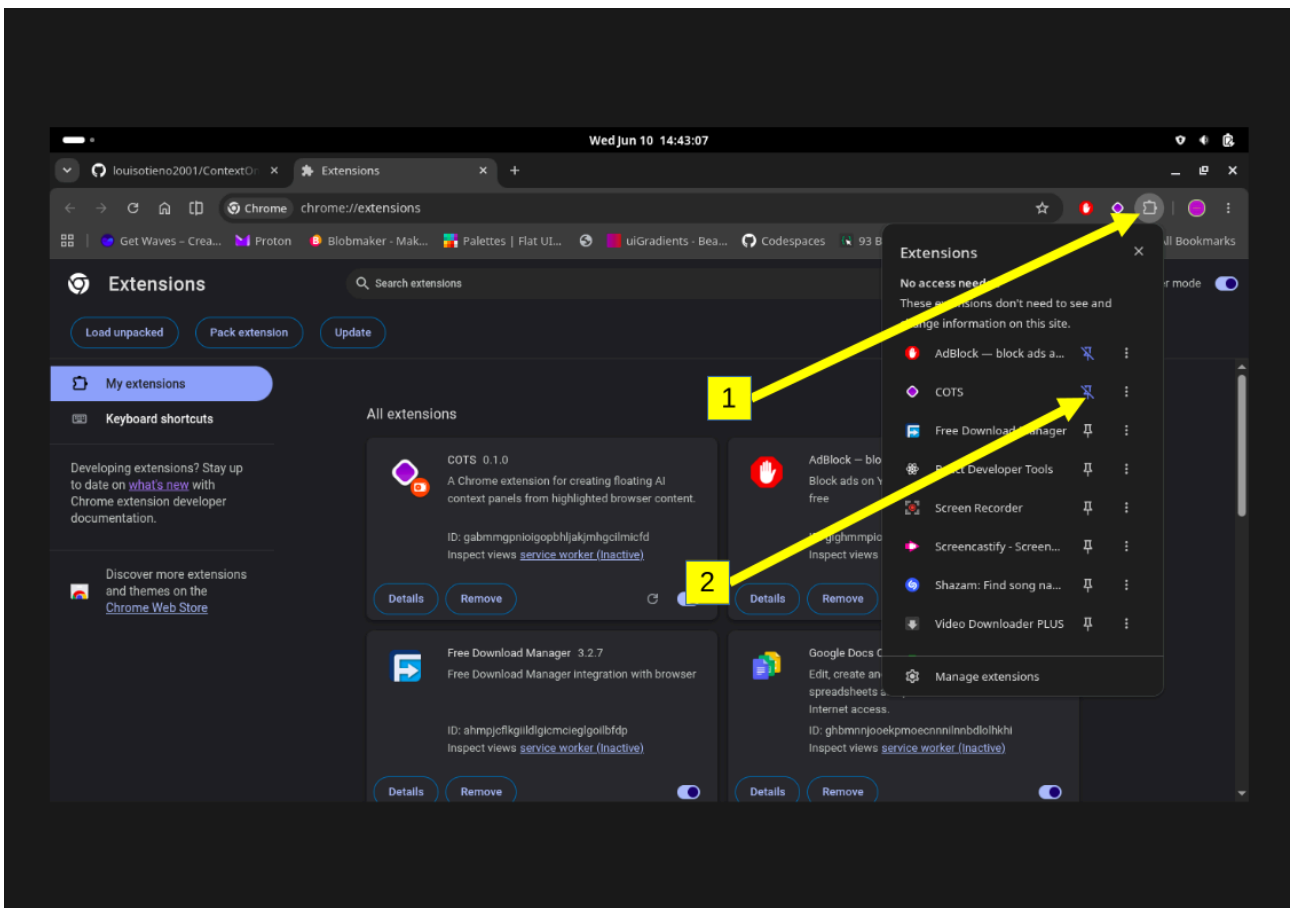

Figure 4: Pinning Chrome Extension

Once pinned, access you extensions easily as shown here from the top bar of the browser:

7 Actual research usage(select, highlight, open panels e.t.c)

Once the above processes are done, it is time to explore the actual usage of the COTs

1. Setup your API keys and other settings by visiting the settings page.

NB: The settings page will look and work similar for whichever browser you are on, sample images shown are for example purposes only and do not show settings limited to the browser they are shown on

1. To visit the settings page follow this steps:
 - Click on the pinned extension Icon
 - Click on the gear icon on the shown popup

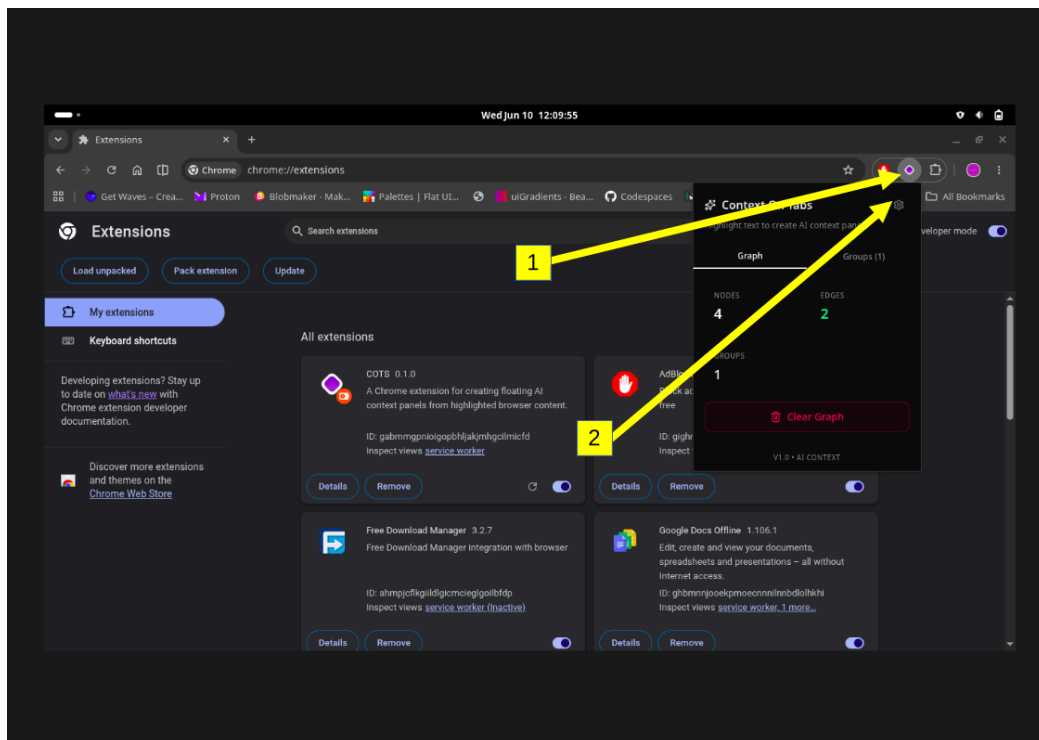

Figure 6: Open settings page

7.1 Settings page

Once you click the gear icons shown in the previous step, you should be in the settings page

The settings page gives you control over which LLM API you want to use, what color theme you want to use e.t.c

The LLM Setup is as shown below:

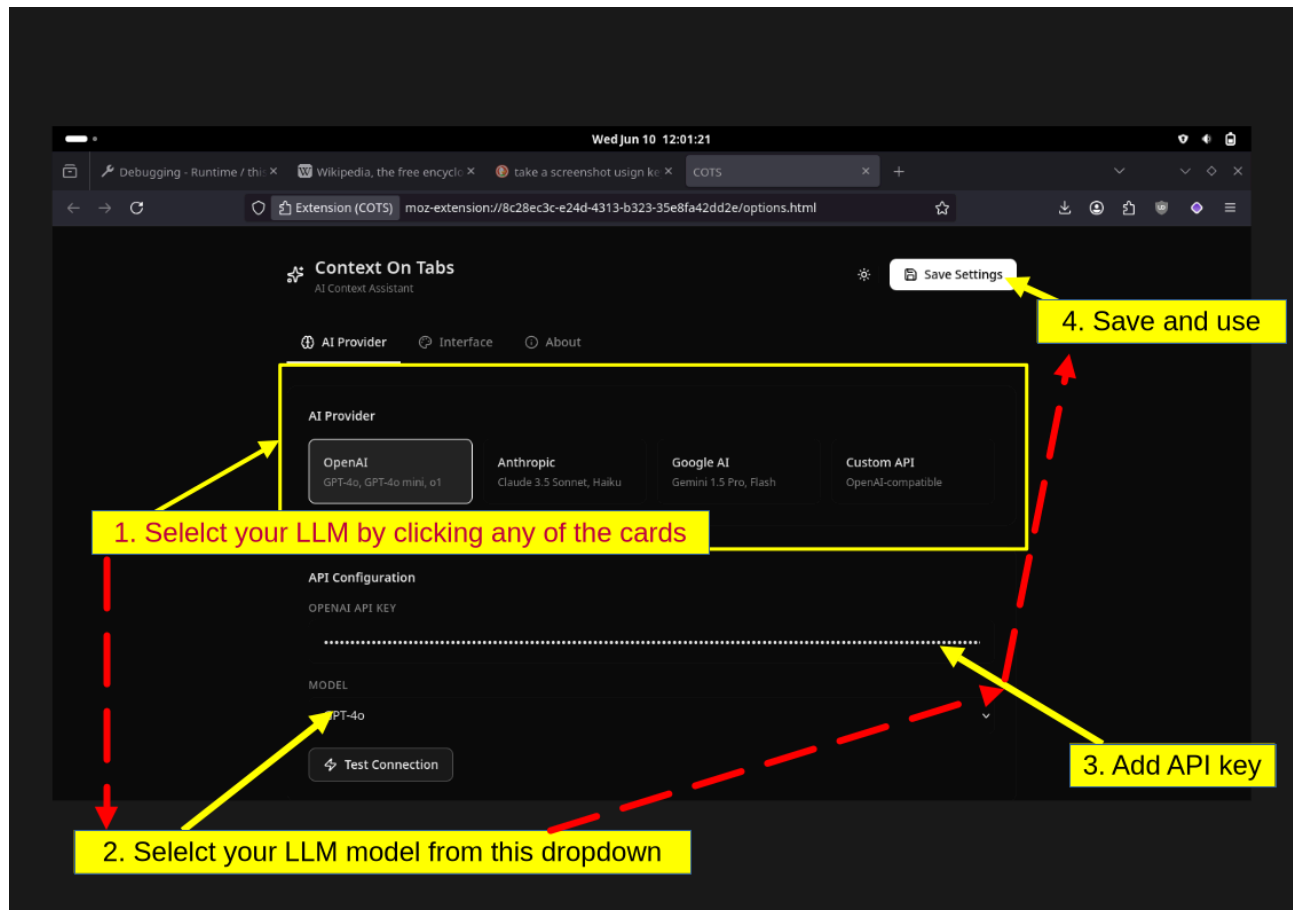

Figure 7: LLM Setup

Theme settings is as shown below;

- Theme setup is done by clicking on the Interface tab and choosing your theme color

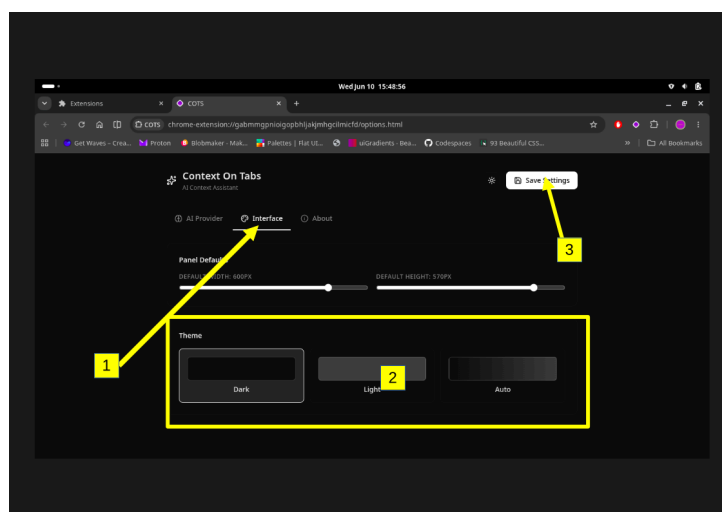

Figure 8: Theme setup

7.2 Using your settings

Once settings are satisfactory and LLMs ready, you can proceed and start using the COTs following these steps:

Open new tab, search your research topic and select your context text and the COTs tooltip will appear as shown below:

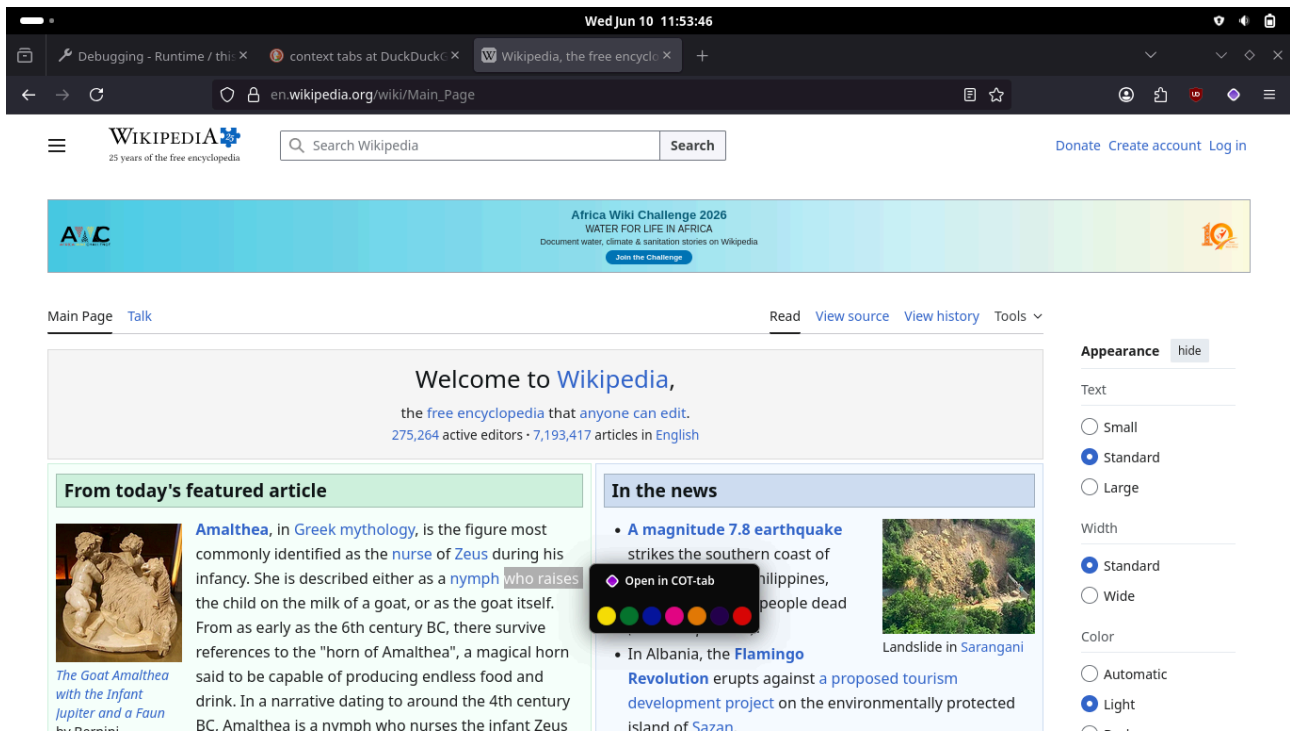

Figure 9: Tooltip

7.2.1 Highlight your text with any color of your choice from the tooltip:

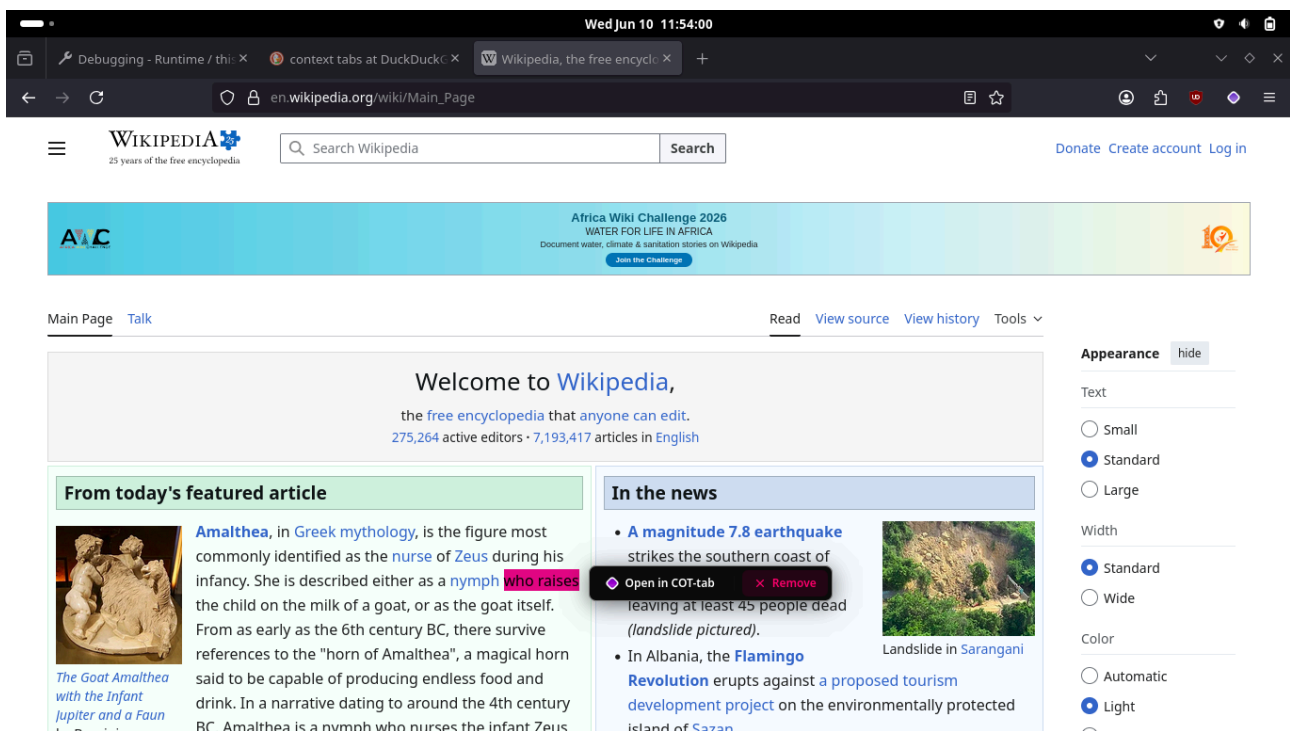

Figure 10: Tooltip

7.2.2 Open a new panel to get into your research mode as shown below:

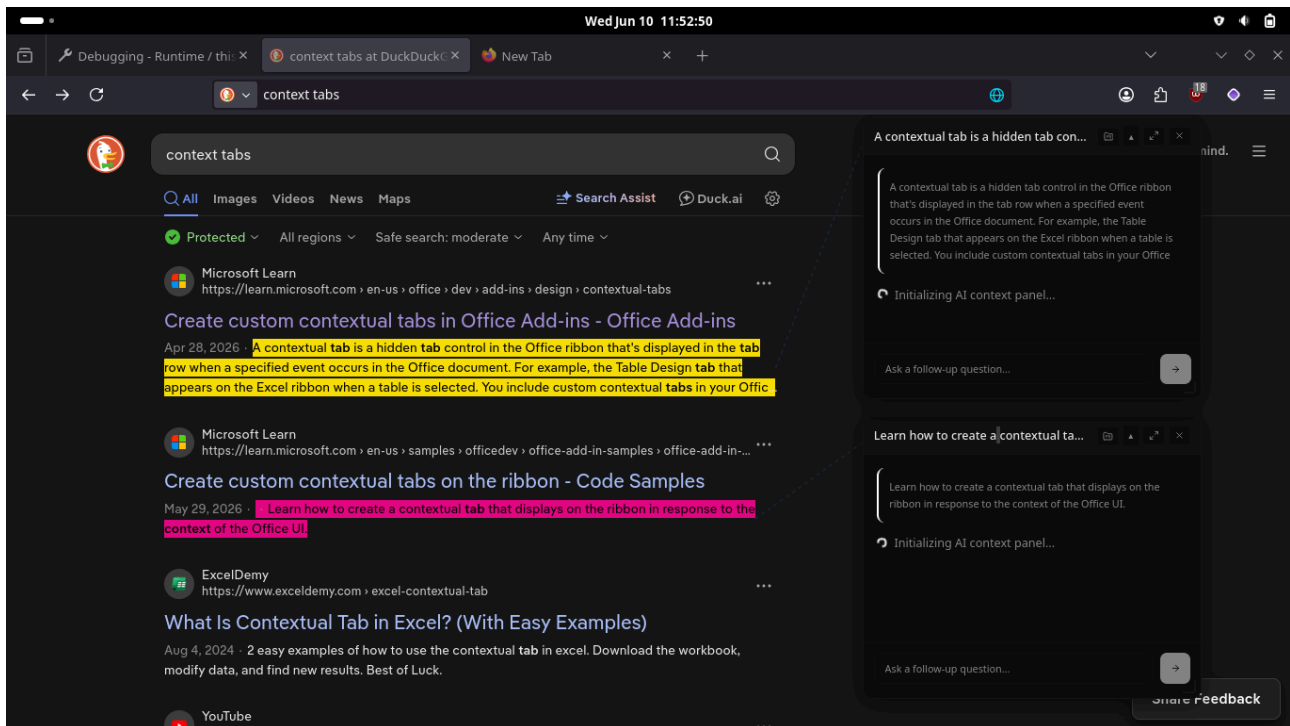

Figure 11: Tooltip

7.2.3 Create a group for related panels

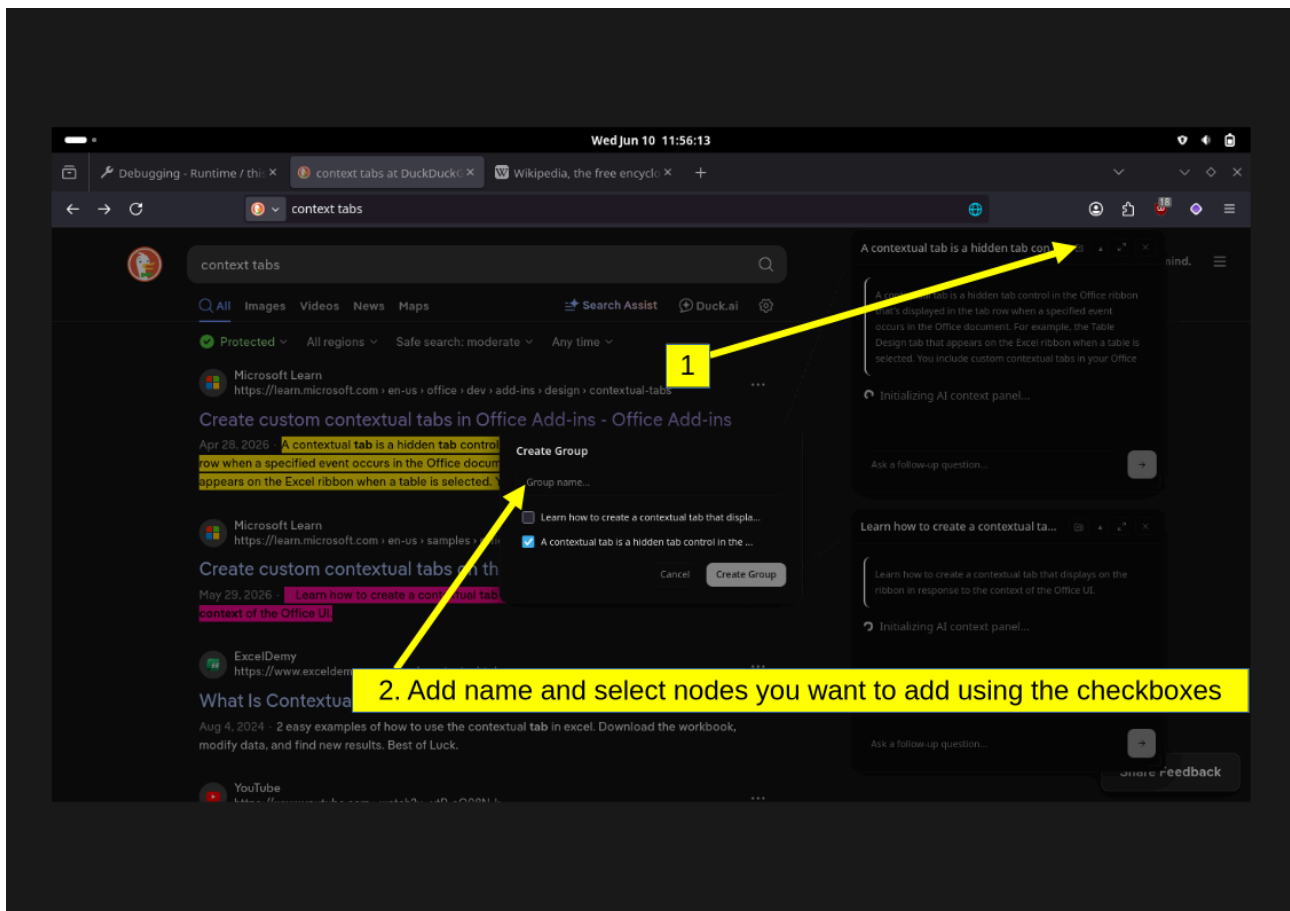

Figure 12: Grouping tabs process

- Once grouped the panels will have a similar group indicator with the parent panel having the group title and generate summary link above it as shown below:

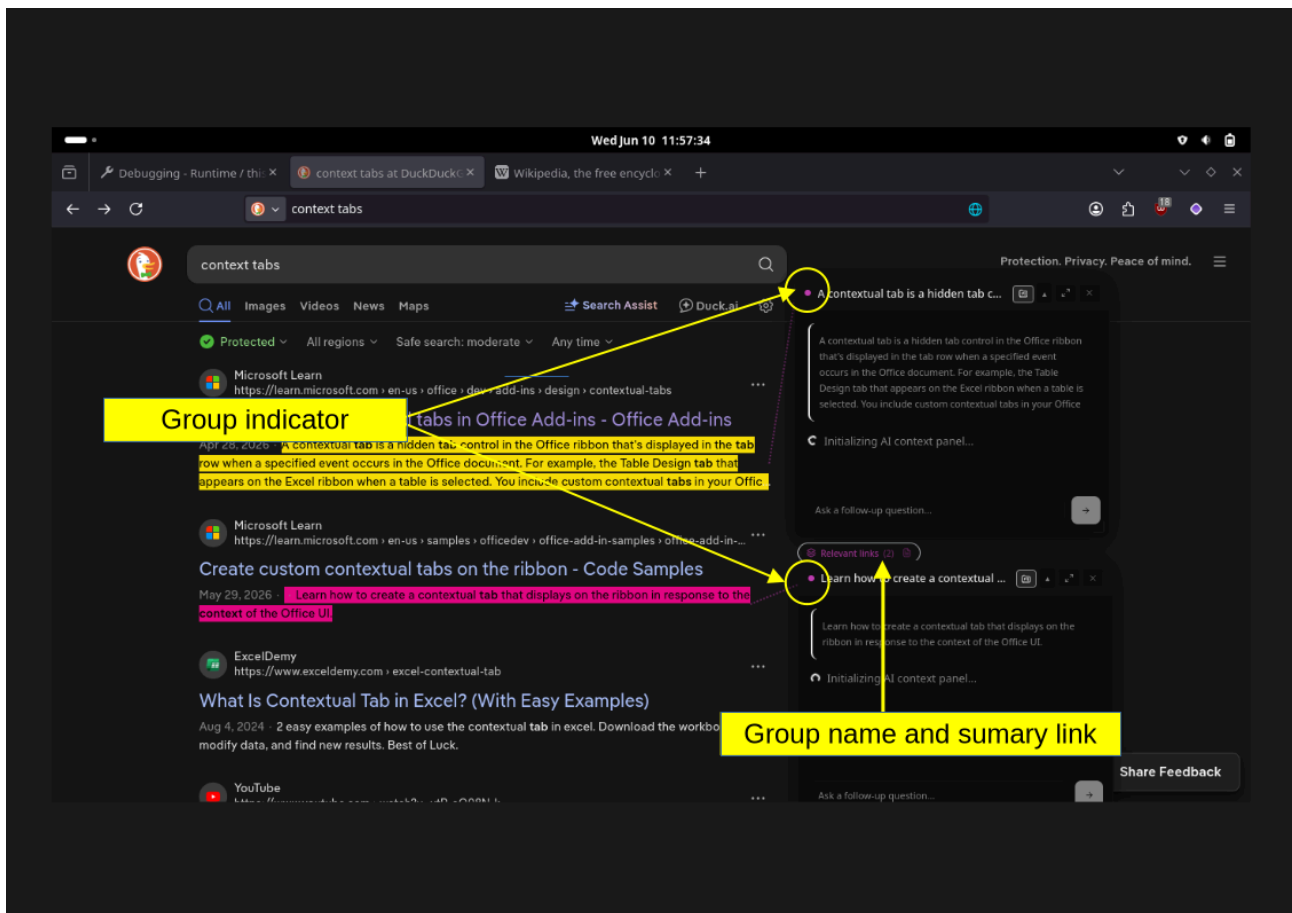

Figure 13: Grouping indicator and summary generator

- You can choose to remove the highlight as shown in the Highlight Figure
